PERTH TRUCK SHOW WRA

Tyre life saving solution here

AIR CTI is more comfortable

AIR CTI was represented at the Perth Truck show by Sales Manager Andrew Kee, along with local WA dealers, Daniel from Westrans Welshpool, and Mairiel from Ausquipp Bunbury.

Andrew spoke about the problems affecting tyres and the Transport operations. "AIR CTI is the key to solve many of these issues," he said.

Graham Lock from Fuel Distributors WA recently had his K200 Twin Steer fitted for AIR CTI at Westrans Services in Welshpool.

This Twin Steer will be working around Kalgoorlie.

Graham can control the tyre pressure from the in cabin and will be able to inflate and deflate as required,

selecting preset tyre pressures at the touch of a button.

With P1 being when travelling on highway fully loaded, P2 for gravel and sand when fully loaded and bitumen empty and P3 for when conditions are extra boggy.

Spud is very happy with the system saying that it gives a more comfortable ride, especially when empty.

He is expecting greater tyre life in the short term and less mechanical repairs and downtime in the long term.

AIR CTI is designed to reduce cabin and chassis vibration, reduce wheel slip and axle tramp and achieve the correct tyre pressure for tyre life and truck control when travelling loaded or

empty on highways as well as dirt, sand and gravel.

One of the main benefits is being able to continue driving when there is an airleak and being able to schedule maintenance at a more convenient location and time.

Andrew can be contacted on 0437 517 423 if you have queries on tyre pressure maintenance or tyre pressures and how to interpret the best pressure for your rig and job.

With systems for drive, steer, trailer and 4WD's he has the kit for you.

Andrew says it pays to work with AIR CTI which was guaranteed to help transport work smarter not harder. Visit www.aircti.com

Brian's been a transport champ for

BRIAN Vernon was presented with a plaque at the industry cocktail party held as part of the Perth Truck Show.

Mr Vernon has been with the CVA Western Australia for 40 years and now is Western Star Trucks' product

he said his biggest achievement was getting the government to back down on increasing stamp duty in WA.

He said the government at the time decided to increase stamp duty from 3% to 5%.

"We lobbied them and got them to reverse back to 3%," he said.

He resigned from the CVA WA 12 months ago but said he enjoyed the monthly meetings where the association would work together with

everybody to an important people to fit transport so He's been

AIR CTI for MORE KMS FROM YOUR DRIVE TYRES - SAVE 40-100% of Tyre Life

Ultimate Tyre Pressure Management maximises tyre print, results in more traction, better control, less vibrations on bitumen, dirt, sand, stone, mud and boggy tracks. Customized drive, drive & steer, drive steer & trailer systems. Suits Fleet Systems & Owner/Drivers, with pre-set pressures & incremental adjustments available.
